

MEMORANDUM

To: Bruce Bolden

From: Joe Leister

Subject: Final Sprint (Assignment 8)

Date: May 8, 2017

Summary of Team Efforts

A lot of polishing and cleaning up of the code was done in this sprint to make it more readable and remove legacy artifacts that were not needed.

My Two Cents

I made some changes to the exit process (both the default close operation and the exit via the menu) so it had a yes/no/cancel option rather than yes/no which also involved updating the default declaration for the X in the upper right corner on windows platforms or the red dot on Mac platforms so we could actually cancel the dialog without exiting the program. Also during my visit to Moscow I was able to meet with the team and discuss how the GUI layers with containers inside containers for our application so some of the other members could make some adjustments to the interface so it would reflect the way we wanted to layout the editor.

Appendices

Design Specification Document

The current complete version of the Design Specifications can be accessed at our team Github page via the following link. <https://github.com/GoofyGlasses-CS383-S17/Design-Specification/blob/master/Working%20Draft/designspec.pdf>
